Release Notes 5.2.3.5 - Patch Release | 17.04.2013

Remarks
Release notes with changes since version 5.2.3.4.

Change

Area	Importance	Description
Extension	Low	ActionsExtension 0.1.4: Made availability of OptionalDocs configurable. Added relatedEntityId/Name properties to actions.
Extension	Low	PortalWorkList 2.2.3.5
Script Language	Low	The built-in functions "IF", "NOT" and "XOR" now handle null parameter values as false instead of throwing an exception at runtime.

Bugfix

Area	Importance	Description
Extension	Low	ActionsExtension 0.1.4: Fixed NullPointerException that occurred when using an actions backed by a dynamic catalog.
Extension	Low	ComponentExtension 2.0.49: Fixing a compatibility problem with IE8 and jQuery toggle method which caused IE8 to freeze when toggle was executed multiple times on some environments.
Screen Rendering	Low	Screen Component "Comment": Do not break inline layout if comment is not rendered to HTML stream.
Script Language	High	The following bugfix from patch release 5.2.3.4 has been reverted: "Passing null as argument to a script function parameter of a primitive type was not possible." If a null value is passed to a function for a parameter with a primitive type like Boolean or Integer, the null value is now again converted to the type-specific default value, which is 0 for numeric types and false for Boolean. null values for other primitive types like String, Date or User are passed to the function unchanged.
