Release Notes 6.1.8 - Patch Release | 22.01.2015

Remarks
Release notes with changes since version 6.1.7.

Upgrade Notes:
No special actions are required when upgrading from Appway 6.1.7 to 6.1.8.

Appway Platform (Core)

Change

Area	Importance	Description
Export	Low	Log original exception if deployment service fails to add a business object to the export archive.
Libraries	Low	Upgrade Bouncy Castle Crypto API from version 1.37 for Java 1.4 to version 1.38 for Java 1.6.
Process Editor	Low	The wizard used to schedule a trigger date for the timer start event has been replaced with a new and better implementation.

Bugfix

Area	Importance	Description
Cluster	Low	Disable Hazelcast Memcache and REST clients by default.
Configuration	Low	Allow to synchronize configuration properties between several nodes even if content (or server) properties are empty.
Console	Low	Java Threads Table: Prevent NullPointerException if thread has been stopped while collecting thread information.
Dependencies	Low	Change display name of variable definition reference from "Variable" to "Variable Definition".
Documents	Low	Setting vertical alignment on cells in PDF Output Tables did not have any effect.
Global Validation	Low	Exclude "Unsatisfied Dependency" validation errors from static custom lists. The most common reason for such an unsatisfied dependency is that the target business object has been deleted but the reference to it has not been removed from the list. There is no need to report these issues because they do not have any functional impact.
Job Scheduler	Low	Add some randomness to job execution service to compensate for weak time-sync between cluster nodes.
Job Scheduler	Low	Jobs must not be executed if the current node is not in RUNNING state (during startup or shutdown). All job executions which trigger while the application state is not running are now vetoed.
