

Remarks

Release notes with changes since version 6.3.4.

Upgrade Notes:

No special actions are required when upgrading from Appway 6.3.4 to 6.3.6.

Appway Platform (Core)

Feature

Area	Importance	Description
Data Table	Low	It is now possible to set a tooltip for the column header, the cells and the individual cell contents of the table.

Change

Area	Importance	Description
Entity Store	Low	Function "QueryData": Added warn log in case maximum number of results is not specified or equal to 0. The message provides the configured default limit value.

Bugfix

Area	Importance	Description
Studio	Low	Administration: WebServices: Test method tab did not open Interactive Script Editor.
Workspace	High	If an Ajax Update Area is triggered, the screen is correctly resized again.
Workspace	Medium	If the browser window is resized, the Data Table is correctly resized again.
Workspace	High	Missing semicolon caused JavaScript error on workspace.core.xxx.js file.
Workspace	High	Workspace Library Builder: An HtmlHeadScript with a type other than "text/javascript" or "" (empty) will now be rendered again.
Workspace	High	Workspace Library Builder: An HtmlHeadScript with code that also references a Resource Business Object will now be rendered as a separate head resource.
Workspace	High	Workspace Library Builder: If a screen action is executed that ends with a "screenReload" the respective resources of that screen are included in the HTML head again.
Workspace	High	Workspace Library Builder: Relative paths to images within style sheets of file resources will now be converted to absolute paths when the library file is concatenated.
Workspace	High	Workspace Library Builder: The Screen components HTML Head Link and HTML Head Script were adding non-CSS and non-JavaScript resources to the respective resource bundle.

Appway Extensions

Change

Area	Importance	Description
Extension	Medium	<p>ComponentExtension 6.3.8:</p> <ul style="list-style-type: none"> - Feature: DropDownList: If there are more options for the current filter than currently displayed, a message will appear at the bottom of the options list, telling the user to refine their filter in order to see more. The message can be changed by editing the label with id 'aw.DropDownList.moreOptions'. - Feature: DropDownList: The list of options will now automatically load more options as the user scrolls. This behavior works out of the box for all data sources. However, if the data source is a catalog and the catalog provides a filter variable, but no start variable, it will fall back to showing a 'more options' message at the end of the list after loading a certain limited amount of options. In other words, to make use of the continuous loading, a catalog must either support all (filter, start and limit) variables, or none at all. - BugFix: DropDownList: When executing a search on the server side, the version filter as well as the language of the rendered screen are now passed to the server as well. Consequently, labels will be fetched with this version filter and also translated with the correct language. - BugFix: DropDownList: If the HTML id uses a dot (.) or any other character that is reserved by CSS selectors, the component will still work correctly. - BugFix: InfoTable: Reverted the change "When the table switches to the mobile style, text contained within it is all consistently aligned to the left." introduced in 6.3.5 to prevent

		horizontal misalignment for certain elements that are not inline elements.
