Release Notes 6.0.2 - Patch Release | 23.05.2014

Remarks
Release notes with changes since version 6.0.1.

Upgrade Notes:
No special actions are required when upgrading from Appway 6.0.1 to 6.0.2.

Appway Platform (Core)

🐞 **Bugfix**

Area	Importance	Description
Administration	Low	Email: Testing an outgoing mail configuration has always sent the mail with the settings of the "default" configuration instead of the configuration selected in the UI.
Business Object Repository	Low	Delete operation must set "copy-of-uuid" property of business object to null.
Console	Low	Process Instance Details: The dialog for showing details of a process intance now works in IE8 as well.
DataTable	Low	If the collection of a data table is built by a complex script, the binding of a cell editor will not fail anymore.
DataTable	Low	If the data table uses a catalog data source and the catalog uses inherited variables, these variables will now also be passed to the catalog.
DataTable	Low	The table no longer throws an exception if the keys of a named collection are used as row objects.
Deployment	High	Importing the exact same business object version that has been deleted and committed on the local system classified the business object as "the same" as the local version, and did not import it.
Script Language	Low	Function "ERROR": Do not break the script editor if only one argument is passed to the function.
Script Language	Low	Remove "autoConstruct" property from meta-data in DefaultTypeDefinitions if "autoConstruct" is set to false to ensure the change to the "autoConstruct" property is performed.
User Messaging	Low	Fixed extraction of provider-local user ID from external messaging user ID (did not work correctly in case of colons in user IDs)
User Messaging	Low	Fixed NullPointerException on update of non-lowercase user IDs and wrong user ID results in certain cases.
User Messaging	Low	Made DiscussionMessage primitive type refer to DiscussionMessage Java type.
User Messaging	Low	Removed incorrect "autoConstruct" annotations from User Messaging primitive types.
Validation	Low	Validation log files content wasn't written in sorted order. Therefore the validation log diff view showed too many unnecessary changes.
Workspace	Low	CSS: Info Table border styles should no longer be applied to Info Table's children.
