

#### Remarks

Release notes with changes since version 6.2.17.

#### Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.17 to 6.2.18.

## Appway Platform (Core)

### Change

| Area     | Importance | Description   |
|----------|------------|---|
| Security | Low        | Data Table: The data table servlet will not send any java stacktraces to the client anymore. Instead a simple message is returned and displayed in the UI. For further investigation an administrator has to consult the log that will include the complete stacktrace. |
| Security | Low        | JavaScript: Removed the public property "aw.config.debug". It was not used anywhere but it was considered a security risk by automated security scans.  |

### Bugfix

| Area       | Importance | Description  |
|------------|------------|--|
| Data Table | Low        | Fixed typos in german label translation.   |
| Data Table | Low        | If a data table is used in a card layout and the asynchronous initial loading of the data table model was not fast enough, the card layout would not be sized correctly. With this fix it is made sure, that after the asynchronous initialization another window resize event is triggered, so that a card layout and possibly other components can resize accordingly. |

## Appway Extensions

### Bugfix

| Area      | Importance | Description  |
|-----------|------------|--|
| Extension | Low        | ComponentExtension 6.2.22:<br>- Bugfix: CK Editor: Fixed an issue where values were not correctly bind when an Ajax Update was made. |
