

Remarks

Release notes with changes since version 6.2.4.

Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.4 to 6.2.5.

Appway Platform (Core)

Change

Area	Importance	Description
Cluster	Low	Performance: Use optimized Hazelcast calls to put and remove cluster files. This safes network bandwidth and memory when working with cluster files.
Screen Components	Low	Dropdown List: The component now applies colors based on the built-in color business objects for form elements, instead of using hard-coded color values.

Bugfix

Area	Importance	Description
Screen Components	Medium	<p>Dropdown List: Several bugs have been fixed. The most important are:</p> <ul style="list-style-type: none">- Component has not been rendered when it was set to "not searchable" or when "Text If Disabled" was active.- A disabled searchable dropdown with "Text If Disabled" set to true was ignoring the property "If empty disabled selection, display" property, always showing "Select..."- The component was not being grayed out when disabled.- When a value was set on the component, the option value (id) was displayed instead of the option label (display value).- The component allowed to set values which were not part of the list of options.
