

Remarks

Release notes with changes since version 6.2.18.

Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.18 to 6.2.20.

Appway Platform (Core)

Feature

Area	Importance	Description
Data Table	Low	Added the 'onfetched' action to Data Tables. This action is triggered every time the Data Table retrieves new rows.

Change

Area	Importance	Description
Configuration	Low	Removed Property "nm.workspace.cache.version.enabled". With the new Workspace Library Builder, this configuration property has become obsolete and if enabled could even work against the cache control of the created resources.
Security	Medium	Libraries: Updated Apache Commons FileUpload from 1.3.1 to 1.3.2. This is a fix for CVE-2016-3092.
System Health	Low	Configuration system health sensors are now run on one node only. The other nodes in the cluster will simply show an OK state. Previously, those sensors were running on all nodes, but each computing the same result.
System Health	Low	Using a single Hazelcast executor for all Configuration system health sensors.

Bugfix

Area	Importance	Description
Data Table	Low	The component property "Page Index" will now be persisted. If you use this property in your solution, please make sure to open all screens with a value on this property, set the desired value to it and save the screen.
Login Screen	Low	Now the viewport on the login screen is not ignored.
System Health	Low	Extension Configuration sensor now correctly closes the file input stream which was used to compute the MD5 sum of the extension JAR file.
