

## Remarks

Release notes with changes since version 6.2.9.

## Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.9 to 6.2.10.

## Appway Platform (Core)

### Feature

Area	Importance	Description
Data Table	Low	The Data Table screen component has an additional event "onpaged" that will be triggered if the page has changed.
Studio	Medium	Added "Serialization Statistics" module under "Administration > System" that shows serialization information about distributed Hazelcast maps.

### Change

Area	Importance	Description
Login	Low	Replaced the logo of the login page with the new logo.
Screen Component	Low	Text Field: The input type property can now be switched to a dynamic expression to support different input types.

### Bugfix

Area	Importance	Description
Deployment	Low	When a deployment is exported without locking Appway it is possible that someone commits business objects while processing. This can lead to inconsistencies in the export's control structure file and the import will fail. The fix installs a fallback and tries to load the affected business objects by circumventing the control structure file.
Monitoring	Low	JMX MBean Handler: Prevent occasional concurrent access to HashMap on startup.
Refactoring	Low	After a Refactor ID, components implemented in extensions were not able to save changed business object IDs.
Screen Editor	Low	Validation now correctly reports unexpected combinations of URL Action with Ajax Update Area Action.
Studio	Low	Container Editor: Implement "highlightLocation()" to make local and global search work.
Studio	Low	Container Editor: Items inside the editor are now correctly highlighted whenever the editor is opened from global search.
Studio	Low	Integration Link Editor: Items inside the editor are now correctly highlighted whenever the editor is opened from global search.
Studio	Low	Test Data Editor: Fixed a bug where the editor failed to open if the test data business object contains a dot inside its identifier.
Studio	Low	Test Data Editor: Items inside the editor are now correctly highlighted whenever the editor is opened from global search.
Workspace	Medium	Consistent field sizes for suggestion fields.
Workspace	Medium	Dropdown List, Checkbox List, Radiobutton and Radiobutton List components: Use special output converter if the binding is of type Integer or Long. Prevents the usage of the default number-to-string converter which adds group separators, causing the page value not to match the list options.
Workspace	Low	Dropdown List: Fixed the "aw.generic.FormElementBorderFocused" color business object not being applied to the dropdown list when open.

## Appway Java SDK

### Feature

Area	Importance	Description
SDK	Low	Process Engine: Collect method call statistics for process listener invocations. To start collecting, set the logger "com.nm.sdk.data.processes.listener.ProcessListenerUtils" to level INFO. Calling the method "ProcessListenerUtils.logMethodCallStats()" then will write the statistics to the above logger.
