

Remarks

Release notes with changes since version 6.2.5.

Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.5 to 6.2.6.

Appway Platform (Core)

Change

Area	Importance	Description
PDF Renderer	Low	Improved error message if an image is not found during PDF rendering.

Bugfix

Area	Importance	Description
Cluster	Low	Workaround for Hazelcast bug. Using a distributed task instead of IMap.keySet(). Improves network performance.
Data Table	Low	Avoid NullPointerException in screen editor if the currently set data class cannot be found.
Data Table	Low	If a data table is used in a process, no keep-alive is sent anymore. A process listener will take care of removing model instances. This prevents accidentally removing a model instance that is still in use.
Data Table	Medium	The data table now uses the correct version filter instead of always using a LatestCommittedFilter. This is a fix for a bug introduced in 6.2.2.
Screen Components	Medium	Dropdown List: Client side searchable Dropdown Lists will now be rendered with a fixed height and width to prevent overlapping content in an Adaptive Flow Layout.
Studio	Low	Business Object Editors: The editors for documents, document sets, rule sets and reports no longer sorts the list of business objects automatically.
Workspace	Low	Default font will now be applied to button tags.
Workspace	Low	The file name for the font definition source-sans-pro italic with font-weight 400 is now correct.
