

Remarks

Release notes with changes since version 6.2.15.

The bug fixes in this release are all related to issues introduced in Appway 6.2.14 or 6.2.15.

Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.15 to 6.2.16.

Appway Platform (Core)

Feature

Area	Importance	Description
Data Table	Low	It is now possible to set a tooltip for the column header, the cells and the individual cell contents of the table.

Change

Area	Importance	Description
Data Table	Low	The status bar numbers (visible row count, total row count, page count) will now be rendered with the same format like other components do. The formatting is determined according to the Locale in use. Appway first checks the configuration property "nm.default.locale". If it does not have a value (default), Appway will get the default locale from the Java Virtual Machine.

Bugfix

Area	Importance	Description
Workspace	High	Workspace Library Builder: An HtmlHeadScript with a type other than "text/javascript" or "" (empty) will now be rendered again.
Workspace	High	Workspace Library Builder: An HtmlHeadScript with code that also references a Resource Business Object will now be rendered as a separate head resource.
Workspace	High	Workspace Library Builder: If a screen action is executed that ends with a "screenReload" the respective resources of that screen are included in the HTML head again.
