

## Remarks

Release notes with changes since version 6.2.12.

## Upgrade Notes:

No special actions are required when upgrading from Appway 6.2.12 to 6.2.13.

## Appway Platform (Core)

### Change

Area	Importance	Description
Data Table	Low	Ellipsis now appear again if the content is too long to display.
Entity Store	Low	Added locks on store and indexing operations to prevent race conditions in between modifications of the same object reference.
Entity Store	Low	Function "QueryData": Changed default size of data set to be returned from 0 (unlimited) to 100.
Studio	Low	System Health: Added ascending sorter to the "State" column, i.e., errors will appear at the top, followed by warnings.

### Bugfix

Area	Importance	Description
Cluster	Medium	Cluster logs are now compacted as expected, with no data "loss".
Cluster	Low	Fixed raced condition in EventSourceServiceImpl.
Configuration	Low	Property names specified in "nm.cluster.additional.nosync.properties" were not handled properly in case of trailing spaces before/after the comma separating the elements.
Data Table	Low	Data Table Servlet: The output stream used to send data to the client is accessed only after all the HTTP headers have been set. This should fix a problem with WebSphere 8.0.
Data Table	Low	The data table will now show SVG icon images correctly in IE9 and IE10.
Data Table	Low	The DateTimeFilter now produces a correct filter range when filtering with operation DURING_THE_LAST.
Data Table	Low	Workspace Icons will now be rendered correctly in the Screen Editor on IE9 and IE10 if resources are set to use SVG.
Mail Service	Low	Set SSL port correctly.
Platform	Low	Prevent ArrayIndexOutOfBoundsException in ThreadInfo.
Refactoring	Low	An arbitrary text could contain a Color ID pattern which results in an empty Color ID which, while Refactor ID is running, will throw an IllegalArgumentException.
Refactoring	Low	Using a Message Router component inside an Integration Link throws an IllegalArgumentException if not all transitions are set.
Rule Editor	Low	Fixed icon not appearing in the dragged element when drag-and-dropping a component from the component panel on the right.
Script Language	High	Removed unnecessary synchronize block from functions CacheClear, CacheNames, CacheRemove, and CacheStore.
Script Language	Low	The operators and functions used to compare numeric values ("<", ">", "<=", ">=") showed some inconsistent behavior when comparing values of different types, e.g., a Long value and an Integer value.
Startup	Low	Fixed race condition causing ConcurrentModificationException in the class EventSourceImpl and potentially NamedEventSourceImpl when parallel services initialization is enabled.
Studio	Low	Console: Workitems: Column "Process" corrected to show process ID instead of process instance ID.
Studio	Low	Discussion: Users without "CompositionAdministrator" role can no longer open business objects from within the Discussion section.
Studio	Low	If opened in IE8 the studio will no longer produce a log warning for a failed minification of the file "/ie8mixedcontent/jsonrpc.js".
Studio	Low	Test Data Editor: Fixed an issue causing a NullPointerException when using the editor as Value Store Editor in DrMoriartyAdapter.
Workspace	Low	Dropdown List: Show the "Select..." placeholder when the value set in the component is

		not in the list of available options.
