Release Notes 6.2.8 - Patch Release | 01.09.2015

Remarks
```
Release notes with changes since version 6.2.7.
```

```
Upgrade Notes:
No special actions are required when upgrading from Appway 6.2.7 to 6.2.8.
```

Appway Platform (Core)

Change

Area	Importance	Description
Cluster Storage	Low	File System Store: Enabling deletion of empty directories by means of a periodic task. If such task is disabled the behavior falls back to the prior one (i.e., eager deletion of empty directories). The task can be dynamically configured at runtime (enabled/disabled as well as its schedule).
Core	Low	Ensure Data Entity IDs are not null.
System Health	Low	Print thread name together with thread id in system health messages related to long running threads.
Workspace	Low	Performance: Added buffering (when necessary) to HTML processing methods.

Bugfix

Area	Importance	Description
Core	Low	Register EnumConverter for BeanUtils in both, current context class loader and application context class loader, to ensure that conversion still works even there are different class loaders during start-up.
Dropdown List	Low	Fixed NullPointerException and layout issue on dynamic searchable dropdown list.
Extensions	Low	Ensure stable order when looking for extension files in data home.
PDF Rendering	Low	PDF Output Table: The top border of a cell, which is not allowed to break, was not rendered if the content got relocated to a new page.
Screen Editor	Low	Button: The tooltip property will now be persisted as well when saving a screen.
Studio	Low	Process Editor: Don't show a modal dialog if an expression property is invalid. Show instead a red border around the text field.
